

# PPA3500 Series 1~6 Phase Power Analyzer

# The Complete Solution for Variable Speed Drive Motor Development DUAL CORE

| Product Overview                            |                                                                     |  |  |
|---------------------------------------------|---------------------------------------------------------------------|--|--|
| 1 to 6 Phase Configuration                  | Up to 6 Phase Analysis within 1 chassis                             |  |  |
| Dual Core Power Processing                  | Enable dual analysis modes with maximum performance                 |  |  |
| PWM Motor Drive Measurements                | High Performance PWM Motor Drive Analysis                           |  |  |
| Leading Wideband Accuracy in 2U form factor | 0.05% Accuracy with class leading high frequency performance        |  |  |
| Wide Screen Display for 6 Phase Analysis    | Unique wide aspect ratio for 6 Phase Analysis                       |  |  |
| Market Leading Phase Accuracy               | 0.005 Degrees Phase Accuracy                                        |  |  |
| Built in High Precision Shunt               | 30Arms or 20Arms (LC) Internal Current Shunt                        |  |  |
| Versatile interfaces                        | RS232, USB, LAN, GPIB, Torque, Speed and Extension for ADI40 Option |  |  |
| Compact Size                                | Unique 6 Phase Power Analysis in 2U form factor                     |  |  |
| Fast Sample Rate and No-Gap                 | 1M sample/s                                                         |  |  |
| Wide Frequency Range                        | DC & 10mHz to 1MHz                                                  |  |  |

# PPA3500 Precision Power Analyzer

#### FRONT VIEW

#### **1 POWER BUTTON**

#### **② FRONT USB PORT**

USB memory port allows data or screendumps to be saved directly to a USB pen drive

#### ③ WIDE ANGLE VIEW DISPLAY SCREEN

Double white LED backlit colour TFT display with high contrast and wide viewing angle

#### **4 SCREEN DISPLAY OPTIONS**

Zoom, Real time, Table and Graph options

#### **5 MEASUREMENT FUNCTION SELECTION BUTTONS**

- POWER ANALYZER
- HARMONIC ANALYZER
- TRUE RMS VOLTMETER and AMMETER
- OSCILLOSCOPE

Measurement Mode Control

#### **6 MEASUREMENT SETTINGS BUTTONS**

Acquisition settings - Sets wiring configuration,

Smoothing and data logging

Coupling - Set coupling to AC, DC or AC+DC, also set bandwidth

Range - Internal or external attenuator, autoranging settings, scale factors

Application mode - PWM, ballast, inrush current, power transformer, standby power,

Plus direct configuration of - Alarm, Auxiliary, Remote, System and Program functions

#### 7 MENU SELECTION AND CURSOR CONTROL

#### **8 START, STOP, ZERO AND TRIGGER**

Trigger button refreshes measurement, Zero resets datalog or allows an offset trim Start and Stop buttons provide manual control of a measurement period

#### **REAR VIEW**

PPA3560 - 6 Phase

#### **9 PHASE INPUTS**

Direct voltage Input: 2.5kVpk (1kVrms) in 8 ranges

Direct current Input: 1000Apk (30Arms) Standard Model, 300Apk (20Arms) Low

Current Model

External voltage and current sensor inputs to 3Vpk in 8 ranges - BNC Connector

#### **10 SYNC CONNECTOR**

Can be utilised for external triggering

#### 11 EXTERNAL SENSOR INPUTS

+/-10V or pulsed input from torque and speed sensors provides direct measurement of mechanical power + analogue output

Extension Port: Connection of auxiliary devices such as the ADI40 40 Channel Analogue Input/Output Interface for Multi-Channel Sensor and Direct Thermocouple Measurement

#### 12 PC INTERFACE CONNECTIONS

Standard interfaces: RS232 + USB + LAN

Optional Interfaces : GPIB

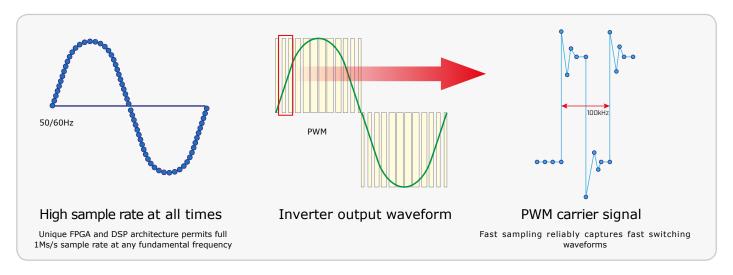

#### (13) Safety Earth Connection

Screw type safety earth connection

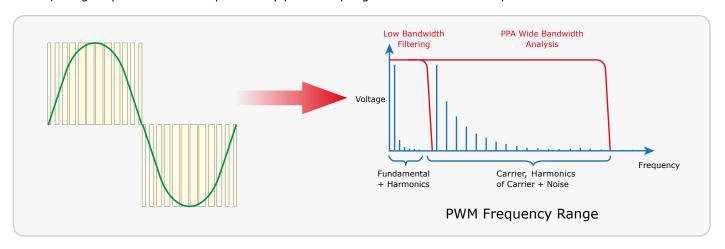

## ■ High Speed Power Measurement - 5ms Datalog Interval PPA3500

Measurements include all frequency components in power waveforms for example, fundamental, harmonics of the fundamental and the carrier of a PWM inverter output by maintaining 1Ms/s sampling at any drive frequency

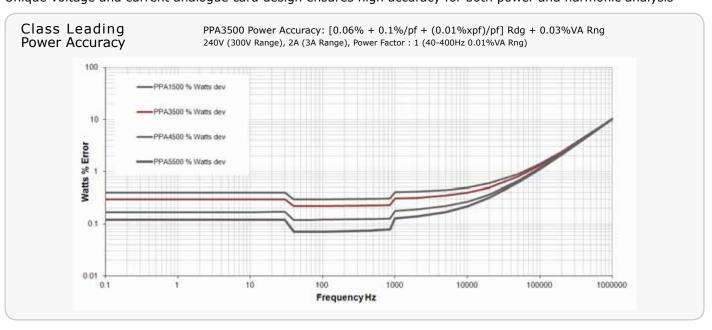

## ■ 1MHz Wideband Frequency Response PPA3500

With 1MHz bandwidth and exceptionally flat response, the PPA3500 provides precision analysis of total power in applications such as lighting ballasts or PWM drives that involve a wide range of frequency components. Proprietary to N4L, a digital process called Expanded Nyquist Sampling ensures no alias components.

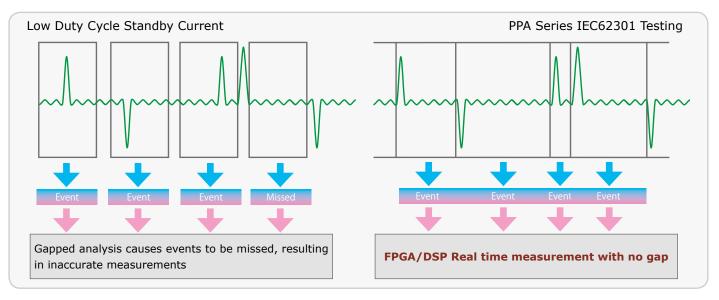

## ■ High Accuracy PPA3500

Unique voltage and current analogue card design ensures high accuracy for both power and harmonic analysis

## ■ DFT Real Time No Gap Analysis PPA3500

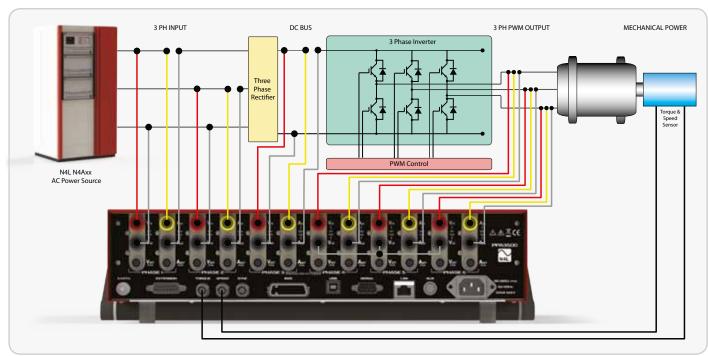

Many power applications have fast changing asynchronous current pulses which are not suited to fixed data length FFT analysis. The PPA series combine a real time DFT (Discrete Fourier Transform) technique with variable window no gap analysis to ensure the optimum speed and accuracy at all times

- Missing data compromises power accuracy
- Long term measurement integration achieves approximately correct average power
- Real Time No Gap analysis ensures correct power measurement
- Simultaneous fundamental and pulse frequency synchronization quickly obtains the correct power

## ■ Up to 6 Phase (8 Wire) Analysis PPA3500

The PPA3560 offers 12 channel, 6 Wattmeter measurements from a single chassis. All measurements are time synchronised utilising a central FPGA core which acquires the sample points from all 12 channels simultaneously, avoiding serialised data acquisition. This enables the PPA3560 to achieve unrivalled channel to channel phase angle accuracy and is one of the key contributors to the market leading 0.005deg phase accuracy.

#### FPGA Core

- Simultaneous data acquisition, time synchronising phases
- High speed harmonic analysis
- True "Real Time" power computation with no gap

#### Measurement parameter examples

- Input/Output power measurement
- Efficiency of the inverter
- Inverter output voltage harmonics
- Motor drive characteristics

#### ■ Input Torque and Speed Sensor PPA3500

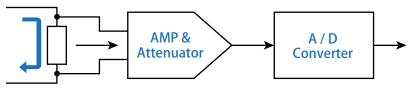

Direct measurement of torque and speed from dedicated inputs that are fully synchronized with the voltage and current channels permits true real time power conversion efficiency to be evaluated

**1**TORQUE Isolated Bipolar±10V / pulsed **2SPEED** Isolated Bipolar±10V / pulsed 3SYNC Isolated Bipolar±10V / pulsed

#### ■ Built in Amplifier and Unique Shunt Resistor PPA3500

The PPA series use a single shunt resistor unique to N4L that combines exceptional linearity and no need for relay switching which can cause measurement errors

| Model   | Low Current Model                  | Standard Model                       |
|---------|------------------------------------|--------------------------------------|
| PPA3500 | 8 ranges: 100mApk - 30Apk (20Arms) | 8 ranges: 300mApk - 1000Apk (30Arms) |
|         | 10mΩ Shunt                         | 3mΩ Shunt                            |

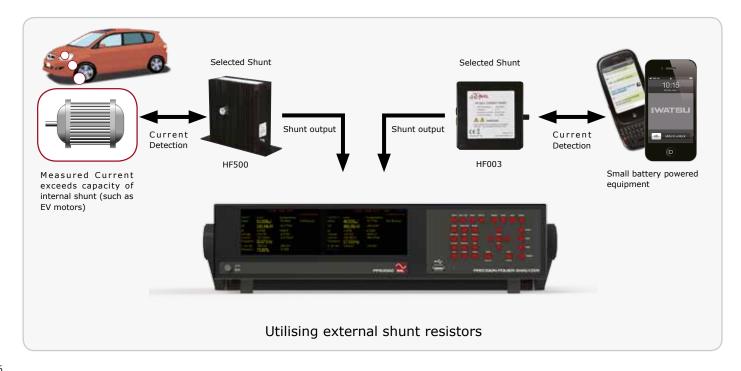

#### External shunt options

(DC ~ 1MHz, 0.1% Accuracy, Inductance<1nH)

| Model | Maximun     | n Current       | Bandwidth      |  |
|-------|-------------|-----------------|----------------|--|
| Model | Rated A     | Peak            | Danuwiutii     |  |
| HF500 | 500Arms     | 5000Apk         |                |  |
| HF200 | 200Arms     | 2000Apk         |                |  |
| HF100 | 100Arms     | 100Arms 1000Apk |                |  |
| HF020 | 20Arms      | 200Apk          | DC $\sim$ 1MHz |  |
| HF006 | 6Arms       | 60Apk           |                |  |
| HF003 | 3Arms 30Apk |                 |                |  |
|       |             |                 |                |  |

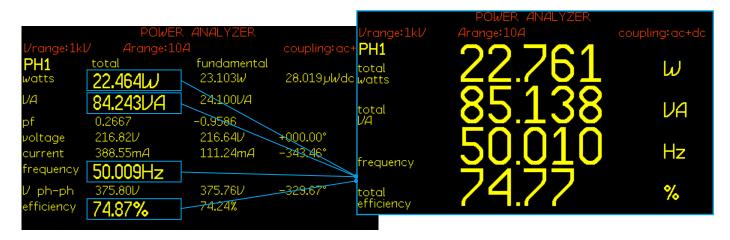

■ Power Analysis PPA3500

#### Wide Angle display for convenient viewing of 6 Phase Power Analysis

| efficiency  | 74.80%                   |                          |                                         |            |

3 Phase analysis display

All power measurement and RMS values are computed simultaneously across 6 phases, allowing measured values to be selected and viewed during analysis.

Here, three phase input and 3 phase output power can be selected with all primary power functions in each phase plus frequency, a selected harmonic, dc watts and phase to phase voltage

Mechanical power, Maths and Efficiency functions can also be added to this screen giving real time analysis of electrical or electrical to mechanical systems

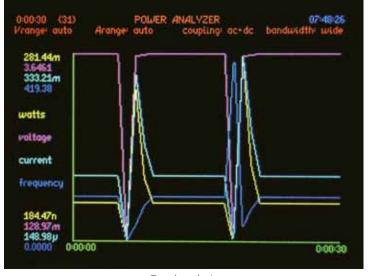

#### MEMORY

Large 500MB internal memory, data logging from 5ms intervals with synchronization to the fundamental frequency and no gap between measurements

Datapoint storage up to 5M

Alternatively the data can be stored in an external USB pen drive or directly to PPALoG PC software

Voltage, Current, Frequency and Power - Examples of graph mode

# ■ Power Integrator (power consumption) Mode, RMS Meter Mode and Impedance Meter Mode PPA3500

Power Integrator mode

RMS Voltmeter mode

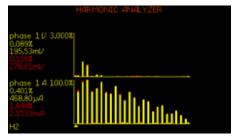

Impedance meter mode

#### Note

In addition to detailed measurements of the phase power parameters, you can check the balance of power between the phases and observe computed neutral current when 3 phase 4 wire connection is selected, this can be performed over 6 phases with 3 Phase 3 Wattmeter + 3 Phase 3 Wattmeter wiring configuration.

#### ■ Harmonic Analyzer and Oscilloscope PPA3500

In Harmonic Analyzer Mode, the PPA3500 provides up to 100 Harmonics with real time, table or bar graph presentation. Measurements are in absolute magnitude and percentage of fundamental with harmonic phase also available. The Discrete Fourier Transform (DFT) is utilised, resulting in highly accurate harmonic analysis. With accuracy figures matching the headline Voltage and Current specification the PPA3500 is a highly capable harmonic analyzer. The use of the DFT is made possible via high speed parallel FPGA signal processing as well as proporietary low level DSP algorithms. The DFT was selected for signal decomposition due to the fact that sample by sample window resolution is possible, instead of the restrictive 2<sup>n</sup> sample window size of the FFT, the DFT is capable of minimal leakeage without the need of error prone window filtering functions.

# **ACQUISITION SETTINGS**

## ■ Auto-Ranging, Range Up Only or Manual PPA3500

Range modes are selectable

①Auto-Ranging Performs automatic switching of voltage and current ranges up and down depending on the level of

the measured value with all inputs linked or ranged independently to ensure optimum accuracy

②Range up only Performs automatic ranging when the input is 120% of range, ranging up only

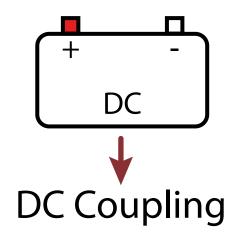

③Manual No automatic ranging, user specifies the range in which to operate

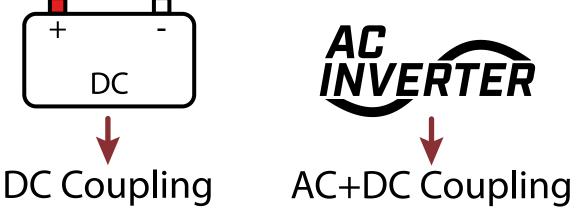

(used when input voltages and currents are known) or during inrush current testing

## ■ Independently Set Input Coupling PPA3500

Independently set input coupling so different methods of sensing can be implemented. Such as CT's on phase 1+2, resistive shunt sensing on phase 3 and Rogowski coils on phase 4~6.

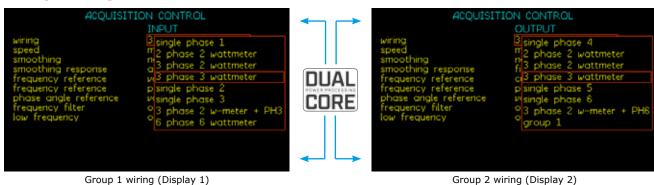

> **AC Waveforms** DC Waveforms

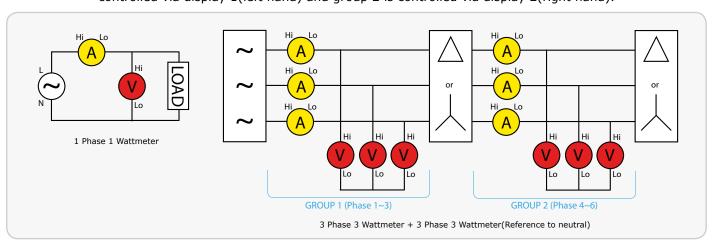

AC+DC and DC coupling both provide 1MHz bandwidth measurements, the coupling setting ensures the instrument is synchronised to the largest power component of the measured waveform. DC coupling should be used for DC bus measurements and AC+DC coupling used for Inverter Output and AC input power measurements.

## ■ Wiring Settings PPA3500

The PPA3500 utilises a dual control menu system, the instrument is divided into 2 distinct groups. Group 1 is controlled via display 1(left hand) and group 2 is controlled via display 2(right hand).

# **ACQUISITION SETTINGS**

## ■ Bandwidth Settings PPA3500

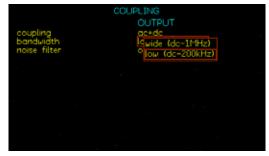

Low(DC-200kHz) Basic power (50/60Hz) including

harmonics of the fundamental while

rejecting high frequency noise

Wide(DC-1MHz) Wideband applications such as PWM

> inverter drives including all power components for true total power

Example of wiring configuration showing 1 phase, individual coupling settings also available.

The PPA3500 series includes a programmable digital filter that allows users to set a preferred bandwidth

### ■ Display Settings, Smoothing Response and Frequency Reference PPA3500

1) Display update rate

Various settings for the display update rate (5ms  $\sim$  100s) which also increases the smoothing when used together with the smoothing option. A 'window' option permits direct control of the measurement window size

Example of setting the window, eg (100Hz set to 10ms)

#### 2Smoothing settings

Working in conjunction with the speed setting, a smoothing filter can then be applied to the measurements. Normal and slow options are available which apply an increasing time constant to the output of the measurement window

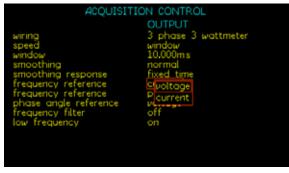

| speed     | update<br>rate | normal<br>time<br>constant | slow time<br>constant |
|-----------|----------------|----------------------------|-----------------------|
| Very Fast | 1/80s          | 0.05s                      | 0.2s                  |
| fast      | 1/20s          | 0.2s                       | 0.8s                  |
| medium    | 1/3s           | 1.5s                       | 6s                    |
| slow      | 2.5s           | 12s                        | 48s                   |
| very slow | 10s            | 48s                        | 192s                  |

- Display update speed settings
- Setting the filter (normal/slow)

## Frequency Reference PPA3500

When making a precision measurement of ac power, correct synchronization with the fundamental frequency is essential. The PPA series provides a solution to frequency synchronization in a wide range of applications including Standby Power, Variable Speed Drives, Electronic Ballasts and DC to AC Inverters with the option to select voltage, current, speed or ac line input as the frequency reference.

Frequency Reference

## ■ Simultaneous Dual Mode Capability

The PPA3500 has the capability to output two modes simultaneously utilising N4L's proprietary "Dual Core Power Processing" Architecture, providing great flexibility to the user. Of particular interest is the ability to display both Power Analysis and Oscilloscope data at the same time, while maintaining full sample rate. Traditionally, it is common for instruments to decrease raw sample rate within the power analyzer function when another mode is enabled. The PPA3500's "Dual Core" architecture allows for maximum performance of both modes.

CORE

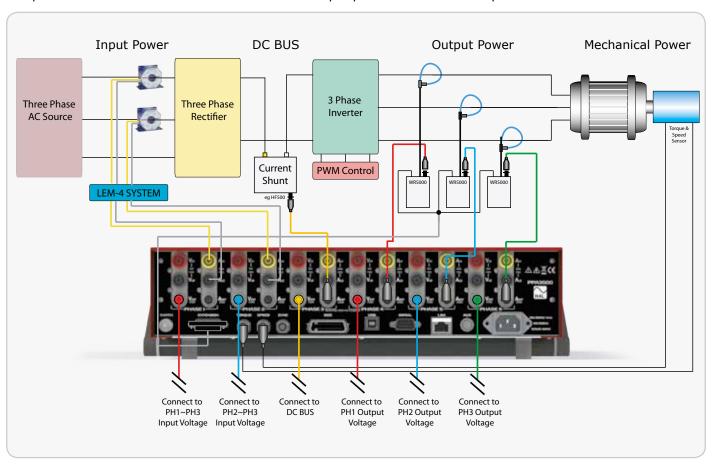

#### **Example Dual Core Operation**

# **APPLICATIONS**

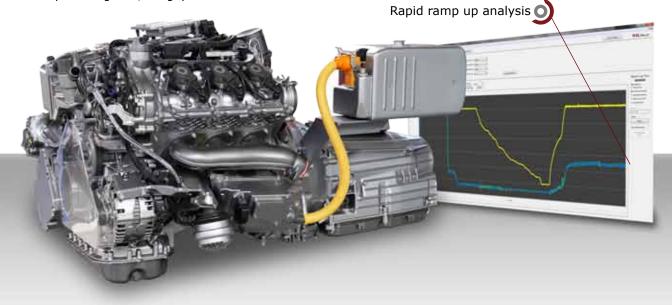

#### ■ PWM Motor Drive Evaluation PPA3500

The PPA3500 is the ideal solution for 6 Phase Analysis within a single instrument, a typical application is Variable Speed Inverter Drive analysis. Utilising proprietary digital filtering algorithms, the N4L power analyzer range offers unrivalled performance. The PPA3500 can be used in conjunction with external current sensors such as the WR5000 - a 1MHz 5000A Rogowski Coil in high current applications as well as the LEM range of Zero Flux Current Transducers. Inverter efficiency is available via 3 Phase 2 Wattmeter method + CH3 + 3 Phase 3 Wattmeter, whereby PH1+PH2 are utilised to measure the input power to the three phase rectifier, PH3 is used to monitor DC bus power and PH4~PH6 are used to monitor the output power of the variable speed inverter drive.

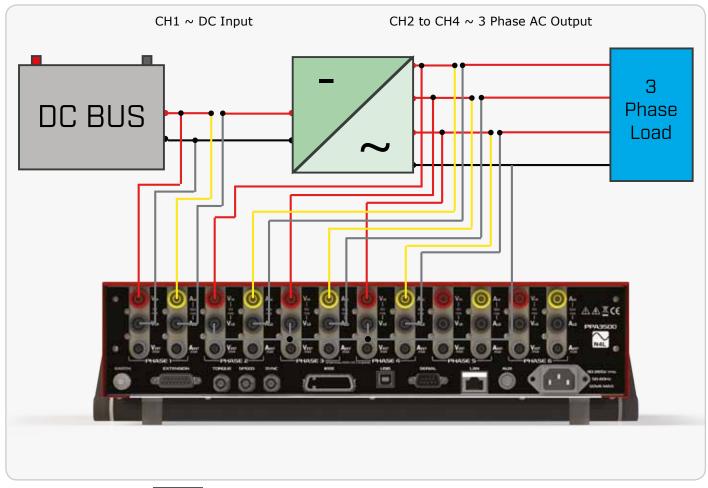

## ■ High Speed Analysis PPA3500

The PPA3500 features high speed parallel digital signal processing, this enables high speed tracking of changing inverter drive frequencies and power parameters during ramp up and ramp down conditions, for example in electric vehicle applications. N4L's free to download software package (PPALoG) offers datalog intervals down to 5ms, providing fast, no-gap real-time data direct to software.

## ■ 4 Phase Solar Inverter Performance Analysis PPA3500

The PPA3500 provides a highly accurate solar inverter analysis and evaluation solution from one measurement chassis, featuring independent frequency detection N4L Power Analyzers exhibit the ability to synchronise to the 50/60Hz output signal simultaneously with the DC input signal from the solar array. Both efficiency of the inverter, quality of the AC output and many other performance parameters can be recorded. In the application below, the PPA3500 is configured as a 4-Channel solution which allows the user to display DC Input to 3 Phase output efficiency data along with THD power quality measurements from one measurement chassis.

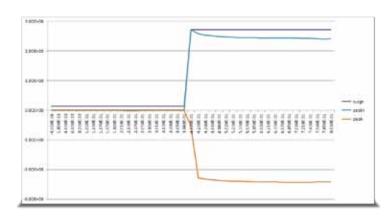

#### ■ Inrush Current PPA3500

Accurate inrush current measurements rely upon two factors aside from fundamental measurement accuracy, these are gapless measurement and a high sampling rate;

- 1. Gapless Measurement Inrush waveforms by their nature are transient; gapless measurement is vitally important in order to ensure that inrush waveform data is not missed.
- 2. High Sampling Rate When working with mains frequencies, many power analyzers have low sample rates due to the computation of measured values from a data block of finite size. The PPA3500 utilises a proprietary real time signal processing technique that maintains full 1Ms/s sample rate irrespective of the measured load frequency, ensuring that high frequency events are captured without aliasing.

Example Inrush current data, datalogging at nominally 20ms intervals directly to PPALoG

## Calibration and ISO17025 Certification

#### UKAS PPA3500

Newtons4th are an accredited UKAS Calibration laboratory, all PPA3500 Power Analyzers are supplied with an ISO17025 UKAS Calibration Certificate as standard. Calibration of N4L Power Analyzers is an integral and important part of our service to our clients, we offer quick turnaround times at a competitive price. Re-Calibration is also available at our international offices and various distributors throughout the world\*.

#### ■ Schedule of Accreditation PPA3500

N4L's schedule of accreditation to ISO17025 is wide ranging and an overview of the schedule is detailed below, for more specific information please see the UKAS website to view the full accreditation schedule.

| ISO17025 UKAS Accreditation Schedule                        |                                                           |                 |  |  |
|-------------------------------------------------------------|-----------------------------------------------------------|-----------------|--|--|
|                                                             | Signal Amplitude                                          | Frequency Range |  |  |
| Voltage Sine Amplitude                                      | 1V to 1008V                                               | 16Hz to 850Hz   |  |  |
| Voltage Harmonic Amplitude                                  | 0V to 302V                                                | 16Hz to 6kHz    |  |  |
| Current Sinewave Amplitude                                  | Current Sinewave Amplitude 100mA to 48A 16Hz to 850Hz     |                 |  |  |
| Current Harmonic Amplitude 0A to 15A 16Hz to 6kHz           |                                                           | 16Hz to 6kHz    |  |  |
| Current to Voltage Phase Angle                              | rrent to Voltage Phase Angle -180° to +180° 16Hz to 850Hz |                 |  |  |
| Apparent Power (VA Product) 100mVa to 48.4kVA 16Hz to 850Hz |                                                           | 16Hz to 850Hz   |  |  |
| AC Power                                                    | er 0W to 48.4kW 16Hz to 850Hz                             |                 |  |  |

#### ■ Guaranteed Accuracy up to Crest Factor 20

The Newtons4th Power Analyzers feature a guaranteed accuracy up to a crest factor of 20, meaning the autoranging system of the PPA3500 is able to peak detect automatically upon waveforms with a crest factor (peak/rms) of up to 20.

Newtons4th are the only Power Analyzer Manufacturer in the world\*\* to provide ISO17025 calibration certficates on all new Power Anlayzers as standard. Our ISO17025 Schedule of Accredition includes Voltage, Current, Phase, Power, Harmonics and Flicker. With traceable certification of power accuracy down to 0.5W, N4L offer the ideal measurement solution for certified standby power measurement.

Due to the specialist nature of Power Measurement Instrumentation Calibration, N4L utilise both commercially available calibration equipment (such as the Fluke 6105A for UKAS Certification) along with N4L bespoke designed signal generation equipment in order to calibrate our instruments over the full frequency range (up to 2MHz). Calibration over the full frequency range is uncommon given that such signal generation equipment is not commercially available. When supplied with an N4L analyzer, all customers will receive a calibration certificate covering the complete frequency range.

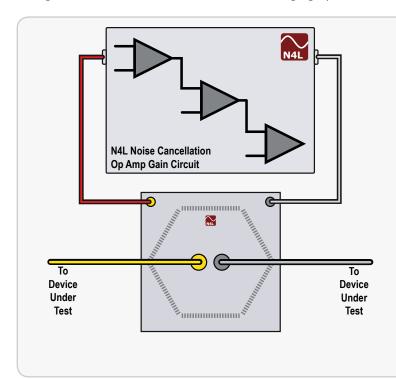

<sup>\*</sup>N4L's UKAS ISO17025 Laboratory is based in the UK, international accreditation is dependent upon local distributor calibration capabilities

<sup>\*\*</sup>According to N4L research, 2015

## Ranging Principles

## ■ 8 Stage Solid State Ranging System - PPA3500

Combining highly linear voltage attenuator and current shunt designs with a proprietary 8 stage solid state ranging system on every phase input, the PPA series achieve a uniquely wide dynamic range, with no need to switch between voltage attenuators or current shunts when ranging up or down.

#### Design features:

Auto DC offset trimming

Single attenuator on each voltage input
High impedance low capacitance
Single shunt on each current input
Low impedance low inductance
Auto peak detect
High speed solid state ranging
High Noise rejection

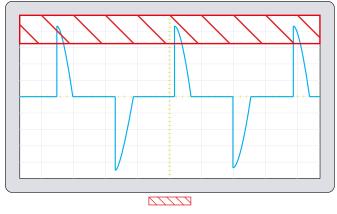

#### Benefits:

Overload protected on any range
Low shunt affect on voltage connections
Low voltage burden on current connections
Market leading phase accuracy
Peak detect ranging ensures no signal clipping
Low attenuator/shunt operating temperature
Fast range switching
Constant frequency response on all ranges
Signal can be applied with instrument powered off

## ■ Auto Peak Ranging Ensures Complete Waveform Analysis PPA3500

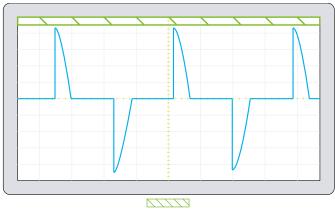

It is often overlooked that for an instrument to correctly calculate power parameters, the entire waveform must be digitised for analysis. The Peak Ranging system employed by all N4L Power Analyzers ensures that the entire waveform is digitised and the correct power parameters are calculated.

Example RMS Ranging system, commonly used in older instrument designs

Waveform within red hashed area is clipped by an RMS ranging system and fixed crest factor setting

Modern Peak Ranging System, implemented on all N4L Power Analyzers

Peak Ranging system auto-detects the peak of the input signal and selects the ideal range

#### Note

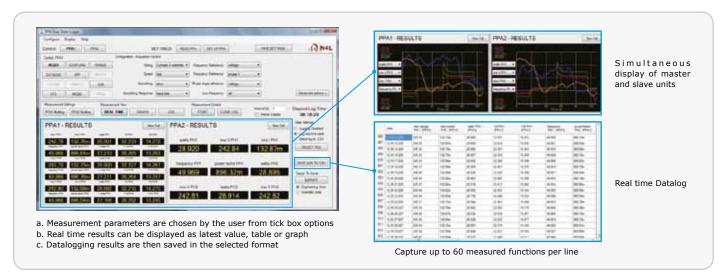

An RMS Ranging system requires the user to have prior knowledge of the crest factor which in many applications is not practical, either because the user cannot reasonably be expected to know this value before a measurement, or because the crest factor is changing during a measurement period. The ideal ranging system is therefore based upon peak detection which does not require the user to be concerned with a crest factor setting. While many RMS ranging systems are only guaranteed to support a Crest Factor of 6, all N4L Power Analyzers guarantee to auto-range with any crest factor and maintain full accuracy with a CF of at least 20. While waveforms with a true CF above 20 are very unusual, 'auto range up' or 'manual' ranging combined with a market leading range sensitivity enables the PPA to achieve a dynamic range equal to a CF >300.

# PC CONTROL AND DATA ACQUISITION

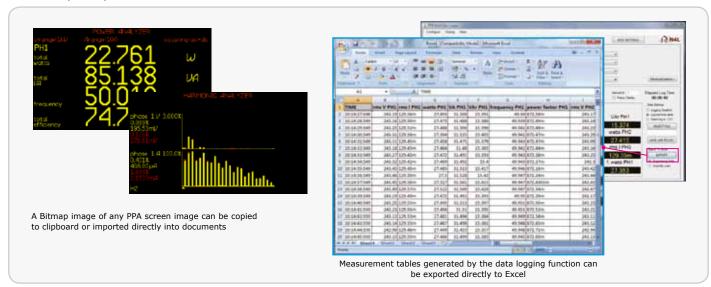

### ■ PC Software PPA3500

Analysis carried out by the instrument can easily be transferred to a PC via USB, RS232 or LAN

① **PPALoG** Exceptional flexibility and ease of use with all the functions included in the original PPAcomm program plus multiple instrument control for 7-24 phase applications and data export to Text file, Excel, Bitmap or Clipboard

#### Data Export options

② **PPA Standby Power** Full compliance testing to EN50564 (IEC62301). Meets or exceeds the requirements and methodology of U.S. EPA (Energy Star), U.S.DOE, California Energy Commission (CEC), among others.

Standby power test screen with real time update of EN50564 (IEC62301) criteria

Option

Standard

All specifications at  $23^{\circ}$ C ±  $5^{\circ}$ C. These specifications are quoted in good faith but Newtons4th Ltd reserves the right to amend any specification at any time without notice

The N4L product range also includes Frequency Response and Impedance Analyzers, Selective Level Meters and Laboratory Power

PSM17xx  $10\mu Hz \sim 35MHz$ 

#### **Applications**

## Newtons4th Ltd N4L

• Power supply phase margin and gain margin (FRA)

- Inductance, Capacitance and Resistance (LCR)
- Analysis of mechanical vibration (HARM)
- Phase Angle Voltmeter (PAV)

Contact your local N4L Distributor for further details

#### Newtons4th

Newtons4th Ltd (abbreviated to N4L) was established in 1997 to design, manufacture and support innovative electronic equipment to a world-wide market, specialising in sophisticated test equipment particularly related to phase measurement. The company was founded on the principle of using the latest technology and sophisticated analysis techniques in order to provide our customers with accurate, easy to use instruments at a lower price than has been traditionally associated with these types of measurements. Flexibility in our products and an attitude to providing the solutions that our customers really want has allowed us to develop many innovative functions in our ever increasing product range.

Newtons4th Ltd are ISO9001 registered, the internationally recognised standard for the quality management of businesses

THE QUEEN'S AWARDS FOR ENTERPRISE: INNOVATION

In recognition of the technical innovation and commercial success of the PPA series, N4L received the "Innovation 2010" Queen's award for enterprise
